BEIHANG UNIVERSITY · COURSE PROJECT

SecondHelping

The campus surplus food marketplace — dining halls sell food they were about to discard, at a steep discount.

ZAMO RZGAR AHMED · GEMING (KEVIN) WU · BIANCA ZAVADISK · JADLAOUI MARWEN

Zamo Rzgar Ahmed

IRAQ · TEAM LEAD

BACKGROUND

From Kurdistan region in Iraq, Zamo is a PhD student at Beihang University. He earned his Bachelor's at Sulaimani Polytechnic University in Sulaymaneyah Iraq, and Master's degree at Nankai University before joining Beihang for his doctorate.

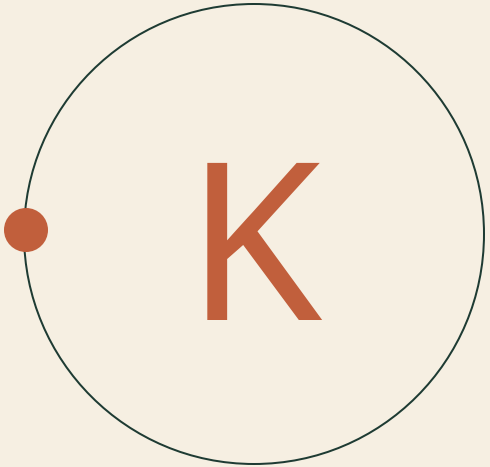

ON THIS PROJECT

Project architecture & structure · team management · presentations.

He designs the overall system and keeps the team coordinated.

Geming (Kevin) Wu

SPAIN · DEVELOPER

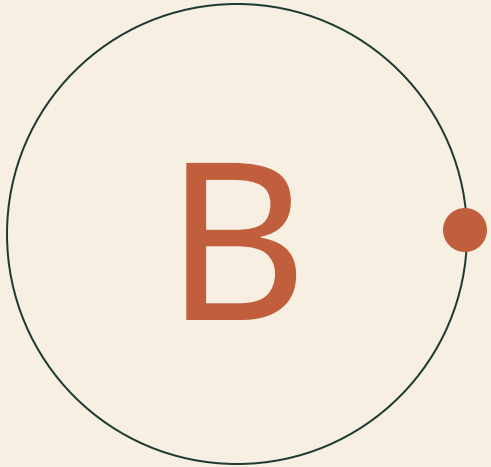

BACKGROUND

From Spain, Kevin studied his Bachelor's in Artificial Intelligence at the Faculty of Informatics at UPV (University of the Basque Country). He is now pursuing a Master's in Data Science at UPC in Barcelona — and spending the full semester at Beihang as an exchange student.

ON THIS PROJECT

Core coding · problem solving. Kevin builds the app in general and tackles the technical problems as they come up.

Bianca Zavadisk

BRAZIL · DEVELOPER

BACKGROUND

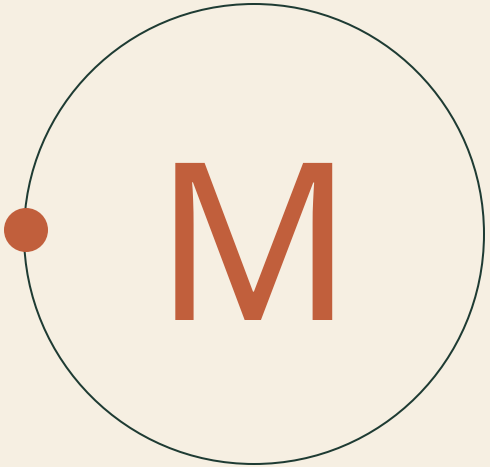

From Brazil, Bianca is a bachelor's student at IMPA Tech, pursuing a degree in Mathematics of Technology and Innovation with a concentration in Computer Science. She is spending the semester at Beihang as an exchange student.

ON THIS PROJECT

Coding · delivery pace. Bianca shares the development workload so the team finishes on time.

Marwen

TUNISIA · DEVELOPER · REPORTS

BACKGROUND

From Tunisia, Marwen is spending the semester at Beihang University as an exchange student.

ON THIS PROJECT

Coding · project reports. Builds out key features of the application and documents the project's methodology and results.

02 — THE PROJECT

What is SecondHelping?

"

Dining halls sell the food they were about to discard — at a steep discount.

Every evening, campus dining halls throw away unsold meals. SecondHelping turns that surplus into a marketplace: good food reaches students instead of the bin, and everyone in the loop wins.

WHO IT HELPS

Students

Get cheap, quality meals on a student budget.

Merchants

Turn food that costs money to dispose of into revenue.

The University

Cuts waste-hauling costs and shrinks the campus footprint.

03 — HOW IT WORKS

One Evening at the Main Dining Hall

19:55 — **The supervisor has 14 meals left over** from dinner service. She opens the merchant dashboard on her phone, taps **"Closing Bag"**, sets the quantity to 14 and the pickup window to 20:15–20:45 — about 30 seconds of work.

20:00 — The meals **go live in the app at 60% off**. Students who follow that dining hall get a notification.

20:05 — Students open the app, see what's available, **filter out anything they can't eat** (allergens), and buy. Each order generates a **one-time pickup code**.

20:15–45 — The student walks to the counter, **shows the code, the staff scans it** — done. Every transaction is logged.

End of term — The dashboard reports **how many meals were rescued**, how much food was diverted from waste, and **how much money students saved**.

04 — BUSINESS MODEL

How SecondHelping Earns

Three revenue streams — one from institutions, two from each transaction on the platform.

01

Institutional SaaS licence

Each dining hall pays a recurring software licence for the merchant dashboard — listing surplus, setting pickup windows, and tracking impact.

02

Flat platform fee per transaction

A fixed fee on every order — predictable for merchants, and it scales naturally as more meals are rescued.

03

Small consumer service fee

A small fee on the student side per purchase — kept low so rescued meals stay far cheaper than full price.

Tools for the System

GitHub	**Main codebase · version control** Central repository for hosting, versioning, and reviewing all source code.
Frontend	**Next.js (React) + Tailwind + shadcn/ui** Component-based user interface built with Next.js, styled with Tailwind CSS and shadcn/ui.
Backend	**TypeScript** Server-side REST API written in TypeScript.
Database	**PostgreSQL** Relational database for persistent and structured data storage.

06 — WHO DOES WHAT

Linking People to the Project

Zamo	**Project architecture & structure · team management · presentations** Responsible for project architecture, planning, keeps the team coordinated, and owns how the project is presented.
Kevin	**Core coding · problem solving** Builds the app in general and tackles the technical problems as they come up.
Bianca	**Coding · delivery pace** Shares the development workload so the team finishes on time.
Marwen	**Coding · project reports** Responsible for building out key features of the application and documenting the project's methodology and results.

Good food shouldn't go to waste —it should get a second helping.

THANK YOU

ZAMO · KEVIN · BIANCA · MARWEN

Any Questions?

We'd be happy to tell you more about SecondHelping.
